Here are all the project summaries:

HVAC Upgrades at ECC:

The scope of this project includes, but is not limited to, the removal of existing unit ventilators throughout the building with new unit ventilators to provide heating, ventilation, and air conditioning. The unit ventilators will also contain provisions for GPS ionization, a technology housed within each unit ventilator that charges particles to aid in air filtration. New condensers to provide cooling will be roof mounted.

Boiler Replacement at Lindbergh ES:

The scope of this project includes, but is not limited to, the removal and replacement of two (2) steam boilers with high efficiency hot water boilers.

HVAC Upgrades at Palisades Park Jr./Sr. HS:

The scope of this project includes, but is not limited to, the removal and replacement of existing hot water piping to the Academic Wing. The removal and replacement of existing unit ventilators with new unit ventilators that will contain provisions for GPS ionization. The pneumatic controls for the unit ventilators will be replaced with new electronic controls. The addition of a chiller and pump skid to provide cooling capabilities to the new unit ventilators. The existing roof over the breezeway, leading from the main building to the academic wing, will be replaced with a new roofing system.

Please contact our office if you have any questions.
